## Advantages of Reading

As an intellectual thing, a publication is prototypically a composition of such great length that it takes a substantial investment of time to compose and a still considerable, though not so extensive, investment time to read. This sense of book has a restricted and an unrestricted sense. In the restricted sense, a book is a self explanatory section or part of a longer composition, a use that reflects the fact that, in antiquity, long functions had to be written on several scrolls, and every scroll needed to be identified by the book it contained. So, for example, each part of Aristotles Physics is referred to as a book. From the unrestricted sense, a book is the compositional whole of that these segments, whether called chapters or books or parts, are parts.

The intellectual content in a physical book need not be a makeup, nor be called a book. Books can consist just of drawings, engravings, or photos, or such matters as crossword puzzles or cut-out dolls. At a physical book, the pages can be left blank or can contain an abstract group of lines as support for ongoing entries, e.g., an account book, an appointment book, an autograph book, a notebook, a journal, or a sketchbook. Some physical books are created out of pages thick and sturdy enough to support other physical items, like a record or photograph album. Books may be distributed in digital form as e-books along with other formats.

Although in ordinary academic parlance that a monograph is known to be a professional academic work, instead of a reference work on a single scholarly topic, in library and information science monograph describes more broadly every non-serial publication complete in one volume (publication ) or a finite number of volumes (even a publication like Prousts seven-volume In Search of Lost Time), compared to sequential books like a magazine, journal, or newspaper. A passionate reader or collector of books is a bibliophile or colloquially, "bookworm". A store where books are purchased and sold is a bookshop or bookstore. Novels are also sold elsewhere. Books may also be borrowed from libraries. Google has estimated that as of 2010, roughly 130,000,000 distinct titles had been published. In some wealthier nations, the sale of printed books has decreased because of the increased usage of e-books.

In the 2000s, due to the growth in availability of affordable handheld computing devices, the opportunity to share texts through digital means became an appealing alternative for media publishers. The term e-book is a contraction of "digital book"; it refers to a book-length book in electronic form. An e-book is generally made available through the world wide web, but also on CD-ROM along with other forms. E-Books might be read either using a computing device with an LED screen like a conventional computer, a smartphone or a tablet computer; or by means of a portable e-ink display device called an e-book reader, such as the Sony Reader, Barnes & Noble Nook, Kobo eReader, or even the Amazon Kindle. E-book readers try to mimic the experience of reading a print publication by using this technology, because the displays onto e-book readers are much less reflective.
